What is a three-phase inverter?

A three-phase inverter is an electronic device used to convert direct current (DC) into three-phase alternating current (AC). This type of inverter is commonly used in industrial and commercial applications where three-phase power is needed, such as in electric motors, pumps, fans, and other heavy machinery.

What is the rated current of a 3 phase inverter?

Rated current 45A at 380V to 480V, 91A at 220V to 240V. The three-phase inverters with sensorless vector control are widely used in high-efficiency scenarios such as heavy machinery, motors, and equipment. 30 kW (40 hp) reliable frequency inverter, 3 phase 240V/420V/480V for choice. Rated current is 60A at 380V ~ 480V, and 112A at 220V ~ 240V.

What is a 90 kW 3 phase inverter?

90 kW 3 phase inverter 230V, 400V, 460V, IP 20 enclosure rating, V/F control mode, 5%-95%, without condensation. The 3 phase variable frequency inverter with input frequency 50Hz / 60Hz has good performance, such as overcurrent protection, overvoltage protection, and undervoltage protection.

Why should you use 380 VDC?

Using 380 Vdc reduces the normal operating current by a factor of 7 compared to 48 Vdc - so reducing copper use per kW of load - and greatly increases the flexibility of site designs, with batteries no longer required to be close to the power converters, and the load able to be located 100s of meters away from the power system.
