

American rural areas use high-power outdoor power

What is energy improvements in rural or remote areas (era)?

The Energy Improvements in Rural or Remote Areas (ERA) program gives communities with 10,000 or fewer people the tools and resources they need to improve the resilience, reliability, and affordability of their local energy systems.

Why do rural households use fewer energy options?

Rural households have fewer energy options. Natural gas is less commonly used for space heating in rural areas, likely because the natural gas infrastructure is not as well developed in rural areas. Rural energy use is related to the rural lifestyle. Most often and in many ways, this lifestyle is a choice.

Why do rural areas consume more energy?

Additionally, even if urban traffic might lead to extremely high fuel consumption, on a per capita basis more energy is consumed in rural areas to move people around. This is mainly due to the longer distances driven and a lack of public transit alternatives in rural areas.

Are rural households more energy efficient than urban households?

The most prominent implications found are: 10 percent more energy. Therefore, rural households are generally more energy efficient per square foot than urban households. This means that improved energy efficiencies may be more difficult to achieve than in urban households. Rural households have fewer energy options.

What is rural energy use?

Rural energy use is related to the rural lifestyle. Most often and in many ways, this lifestyle is a choice. There are different vehicles used in rural settings than in urban settings and they are used in different ways. In rural communities, there is a greater use of larger vehicles, such as pick-up trucks.
