When you take half-used batteries out of seasonal devices like holiday lights or camping gear, store them in a way that keeps them separate from unused batteries to avoid confusion. It also helps if new batteries are left in their original packaging. Speaking of which...

Can you store a battery in a plastic bag?

As easy as it may be to have a dedicated "battery drawer" or to store loose batteries in a plastic zipper bag together, it's not a great idea. Batteries can easily come into contact with each other, which can cause a short circuit, or at the very least cause them to discharge and become drained.

How do you store a 9v battery?

It's also a good idea to get some plastic 9V battery protectors which cover the posts and prevent accidental contact. Another option is to cover the posts with electrical tape while in storage. As easy as it may be to have a dedicated "battery drawer" or to store loose batteries in a plastic zipper bag together, it's not a great idea.

What temperature should a battery be stored?

When it comes to temperature, battery storage is actually pretty easy. The ideal temperature for alkaline batteries is about 60°F, while the preferred range for lithium batteries is between 68°F and 77°F. That being said, all batteries will keep just fine as long as they're within the general range of what would be considered room temperature.
