

Container Base Station Quote

Should a shipping container be placed on the Right Foundation?

Placing a shipping container on the right foundation will keep it level on a long-term basis. If your shipping container's weight is not evenly distributed across its corner castings, your container may shift and warp over time, leading to serious structural problems.

Are 40' containers more expensive than 20' containers?

The prices of 40' containers aren't necessarily twice that of 20' containers. Hence, for clarity, it is crucial to mention the costs of the two container types separately. GoComet offers a free freight rate comparison tool that shows the lowest international shipping prices offered by vendors for a selected port pair.

What is a container freight station (CFS)?

A Container Freight Station (CFS) is located either within a port or at an inland location where goods are loaded into or unloaded from containers. It focuses on the consolidation and deconsolidation of cargo. Though both these facilities handle containers, there are key differences between them: [READ MORE: What is LCL and FCL shipping?](#)

What is the best foundation for a shipping container?

The most popular long-term shipping container foundations are slab foundations, strip foundations, pile foundations, and pier foundations. A concrete slab foundation is a flat, solid base made of poured concrete. It evenly distributes the container's weight, prevents sinking, and protects the underside from moisture, pests, and corrosion.

How a container is delivered to a destination port?

The container is delivered from the origin port CY to the destination port CY. Essentially, the shipper delivers the cargo to the CY for loading onto the ship, and the consignee collects it from the CY at the destination port. This method is straightforward and often preferred for its simplicity and efficiency.

How do you put a shipping container on top of concrete?

o Cement blocks: This approach is also known as "blocking", and involves propping your shipping container on top of concrete blocks. The weight of the shipping container should keep the concrete foundation blocks firmly in place. Blocking is a quick and effective foundation for short-term container placements.

Learn when a shipping container needs a foundation, explore 10 types, and get expert tips to choose the right base for your container project.

A Container Freight Station (CFS) is a facility where cargo is consolidated, deconsolidated, and temporarily stored before being loaded or distributed.
