

How to check the battery level of base station battery pack

What is a base battery system?

The Base battery system is built for performance and reliability. It combines a high-capacity lithium iron battery with intelligent software to optimize energy use. The Base battery system has three main components: the battery pack, inverter, and hub. The long white unit is the battery pack. We mount the battery pack on the ground.

How does a base battery work?

This process is called grid-balancing. Base batteries deploy energy to the grid faster than any other service, which is how Base is able to recoup the cost of the battery equipment and keep prices low for homeowners. The charge level of your Base battery will naturally fluctuate over time, rising and falling throughout a multi-day cycle.

Do base batteries run in two directions?

Base batteries run in two directions, which is how Base is able to keep costs low for homeowners. The batteries charge during off-peak hours, like midday and late at night, when energy is more available and demand is low.

How should a power station be stored?

Store safely: Store the power station in a cool, dry location elevated a few inches off the ground. Avoid exposing it to extreme heat, cold or humidity to prevent damage and corrosion. Consider using a protective case for added safety. Use regularly, every 3-6 months: The battery may lose its charge if the device isn't used for over 12 months.

How to maintain a portable power station?

Performance: A clean exterior, working cables, and healthy battery are all critical factors in maintaining top-notch performance for your portable power station. Safety: Regular maintenance such as battery voltage testing, cable inspections, and secure connections are necessary to ensure the safe operation of your portable power station.

Where should a power station be set up?

It's recommended that your power station is set up on a flat, dry surface while operating. It is important to place your power station away from windows, doors, vents, crawl spaces and other enclosed or semi-enclosed areas, as this can lead to overheating or damage the internal components of the device.
