

Installation of the communication base station inverter

How do I install the communication interface on my inverter?

Plug the communication interface to the left of the interface slot. The far right pins on the lower row of pins remain free. 3. Set the NetID (see Section 4.3, „Setting the Bluetooth Communication“ (Seite 13)). 4. Close the inverter as described in the inverter installation guide. ? The communication interface is installed.

What are the characteristics of different communication methods of inverters?

The characteristics of different communication methods of inverters are obvious, and the application scenarios are different. In order to better weave the underlying network of energy digitization and intelligent development, choose the most appropriate communication method according to local conditions.

How does a low voltage inverter work?

The data signal is connected to the low-voltage busbar through the power line on the AC side of the inverter, the signal is analyzed by the inverter supporting the data collector, and the communication is finally connected to the local power station management system or the cloud platform through the LAN or the Internet 2. Application scenario 4.
