

Northern Solar Inverter Company

What are solar inverters & microinverters?

Solar inverters are responsible for turning the energy generated by solar panels into electricity that homes can use. Microinverters are a type of inverter that attach to the back of every solar panel in a system to maximize energy output. Northern Electric Power offers five models of microinverters:

Which microinverters are compatible with solar panels?

The rest of NEP's microinverters are compatible with solar panels up to either 385 or 450 watts in size. Each BDEM 800, BDM 600X, and BDM 600-LV can connect to two panels, reducing the total number of microinverters needed for a system.

Can a microinverter install a large solar panel?

This is way more than what many microinverters can handle, however, most home solar installations don't install solar panels that large, so you probably won't need to worry about taking advantage of this benefit. The rest of NEP's microinverters are compatible with solar panels up to either 385 or 450 watts in size.

As a specialist in autonomous power supply, we offer our customers a wide selection of perfectly coordinated solar complete systems based on the plug-and-play principle.

Our goal is to become a hardware manufacturer providing power conversion designs to existing product manufacturers in the US. NC Solar Inverters was founded in 2022, with a mission to ...
