

Outdoor power supply structure requirements

How much power do you need for an outbuilding?

If the outbuilding isn't more than 50 ft. from the house and has a few lights and outlets, it usually can be supplied by a 120v, 20-amp circuit and 12/2 w/grd UF cable. But check with local building authorities before you start. Get the necessary permit, code requirements, and inspection schedules.

Do I need a permit to add power to outdoor structures?

The short answer is yes. Most local jurisdictions ask for electrical permits when adding power to outdoor structures. These permits will provide a way to check if your installation meets safety standards and local building codes. Your local building department can help you understand the specific requirements in your area.

What are the rules for outdoor receptacle outlets?

Many of the rules applying to outdoor receptacle outlets are aimed at reducing the likelihood of shock, which is a notable risk anytime a user is in direct contact with the earth. 1 The principal rules for outdoor receptacles include: GFCI (ground-fault circuit-interrupter) protection is required for all outdoor receptacles.

How do you wire an outbuilding?

The first step to wiring an outbuilding is to figure out how many lights and outlets you need. If your needs are modest, you may be able to tap into an existing outlet in the main house and extend the circuit from it. Calculate the total loads for the existing circuit and the extension to see if the circuit has enough capacity.

What size wire do I need for a shed?

We determined wire size based on distance and load requirements. A typical shed about 100 feet from your home with simple lighting and outlets needs: Individual wires inside conduit need a THWN (thermoplastic/wet location/nylon jacket) rating for underground installations.

What are the requirements for aerial installation?

Aerial installations should only be done for short lateral runs, and where they may be installed so that traffic (vehicle or pedestrian) below will not create a hazard by contact. Additional clearance requirements must be observed when passing over driveways, spas, pools, roofs or near windows and doors.
