What should first responders know about energy storage systems?

This document provides guidance to first responders for incidents involving energy storage systems (ESS). The guidance is specific to ESS with lithium-ion (Li-ion) batteries, but some elements may apply to other technologies also. Hazards addressed include fire, explosion, arc flash, shock, and toxic chemicals.

What is a draft Emergency Response Plan for energy storage facilities?

This Draft Emergency Response Plan for energy storage facilities, presented by the American Clean Power Association (ACP), is the result of a collaborative member effort initially undertaken by the Energy Storage Association (ESA) in 2019 and continued following ESA's merger with ACP at the beginning of 2022.

What is a battery energy storage system?

Battery energy storage systems (BESS) stabilize the electrical grid, ensuring a steady flow of power to homes and businesses regardless of fluctuations from varied energy sources or other disruptions. However, fires at some BESS installations have caused concern in communities considering BESS as a method to support their grids.

What happened at Gateway energy storage facility?

On May 15, 2024, Gateway Energy Storage Facility in San Diego, California, experienced a BESS fire with continued flare-ups for seven days following the fire. The facility held about 15,000 nickel manganese cobalt lithium-ion batteries.
