Does mobile energy storage improve power system resilience?

Compared to stationary batteries and other energy storage systems, their mobility provides operational flexibility to support geo-graphically dispersed loads across an outage area. This paper provides a comprehensive and critical review of academic literature on mobile energy storage for power system resilience enhancement.

Why is mobile energy storage better than stationary energy storage?

The primary advantage that mobile energy storage offers over stationary energy storage is flexibility. MESSs can be re-located to respond to changing grid conditions, serving different applications as the needs of the power system evolve.

Why should you use a mobile energy storage system?

This avoids creating stranded assets and saves money compared to multiple stationary energy storage systems. MESSs can also provide energy during emergency conditions and their mobility allows for fast deployment at the location where they are most necessary.

What is a transportable energy storage system?

Referred to as transportable energy storage systems, MESSs are generally vehicle-mounted container battery systems equipped with standard-ized physical interfaces to allow for plug-and-play operation. Their transportation could be powered by a diesel engine or the energy from the batteries themselves.

Does power Edison have a mobile energy storage system?

Power Edison has deployed mobile energy storage systems for over five years, offering utility-scale plug-and-play solutions. In 2021, Nomad Trans-portable Power Systems released three commercially available MESS units with energy capacities ranging from 660 kWh to 2 MWh.

Does Consolidated Edison have a mobile energy storage system?

In 2016, Consolidated Edison of New York announced their plans to develop an 800 kWh MESS unit with ElectroVaya, a lithium-ion battery company. Power Edison has deployed mobile energy storage systems for over five years, offering utility-scale plug-and-play solutions.
