What is a solar cooling system?

It is an autonomous, solar-powered cooling system that can be integrated into various agricultural value chains. Our solution can store agricultural products such as fruits, vegetables, herbs, seeds, and other commodities at the required optimal temperature and relative humidity.

How does a solar-powered cold room work?

A heat exchanger and a control system guarantee reliable cold transfer and air distribution to the storage room. With the solar-powered Cold Room, different products can be cooled down independently of any infrastructure using only the sun's energy. INTERESTED IN THE SELFCHILL COLD ROOM?

Can a cold room run with solar energy?

The Cold Room is designed to run only with solar energy. No additional power support is required. It runs with R290, a natural refrigerant with an ultra-low Global Warming Potential (GWP). Fully adjustable temperature and humidity allow final users to prolong the shelf life of their products.

How does a solar-powered storage room work?

The cold energy is sent to the storage room using an ultra-low power consumption pump. A heat exchanger and a control system guarantee reliable cold transfer and air distribution to the storage room. With the solar-powered Cold Room, different products can be cooled down independently of any infrastructure using only the sun's energy.
