

Thailand does not use base station communications

Will NT provide Gateway station facilities for a foreign satellite?

State-owned telecom enterprise National Telecom (NT), in partnership with low earth orbit (LEO) satellite company OneWeb, has requested the telecom regulator's permission to provide gateway station facilities to serve a foreign satellite.

Which mobile networks are used in Thailand?

All main mobile operators now utilise GSM /3GPP family technologies including GSM, EDGE, UMTS, and LTE. Thailand has six analogue terrestrial television channels, and 24 commercial digital terrestrial channels began broadcasting in 2014.

Are NT and NBTC planning a gateway station in Thailand?

NT and OneWeb began their discussions last year for the development of the gateway station at NT's facilities in Thailand and began discussions with NBTC's management on this issue three months ago, he said.

Who develops telecommunication networks in Thailand?

Historically, the development of telecommunication networks in Thailand were in the hands of the public sector. Government organisations were established to provide telegraph, telephone, radio, and television services, and other government agencies, especially the military, still control a large estate of radio and television spectra.

How much does it cost to land a satellite in Thailand?

Under the NBTC's regulations, the landing licence for a foreign satellite requires a fee of 7% of the total revenue generated in Thailand, while a landing licence for a Thai satellite requires a fee of 4% of the total revenue generated.

How many fixed-line telephone operators are there in Thailand?

There are three fixed-line telephone operators in Thailand: state-owned TOT Public Company Limited (now known as National Telecom (NT)), True Corporation, and TT&T (Currently name "3BB"). As of 2014, there were 5,687,038 fixed-line subscriptions. That number has been in decline since 2008.
