

The role of Chile's wind energy storage system

Why is energy storage important in Chile?

Image: Greenergy Grid constraints have prevented Chile from maximising the potential of its world-class solar resources. Energy storage has, therefore, become a necessity to ensure the financial viability of PV projects, writes Jonathan Tourino Jacobo.

Is Chile ready for a standalone energy storage project?

This project alone nears the capacity (13GWh) the Chilean Ministry of Energy sought in a public land bidding auction for standalone energy storage projects in May of 2024. Chile has been one of the countries at the forefront of the renewable energy transition in Latin America, first with solar PV and now with BESS.

How many energy storage projects are in Chile?

Currently, 36 of the 129 large-scale projects Latin America projects with an energy storage component under development are in Chile, including 32 out of 71 of the region's early works projects. The storage technologies either in use or being considered include:

What kind of energy does Chile use?

Chile has the potential to run exclusively on renewable generation, with an estimated energy mix of 46% solar, 31% wind, 12% hydroelectric, and 8% flexible natural gas power plants, as well as 23% of battery storage capacity. The remaining 2% is split between biomass, geothermal, and other less common energy sources.

Does Chile have a successful energy transition trajectory?

Today the power system of Chile is more than double the size it was in 2014, with a 63% share of renewables. This is observed as a successful energy transition trajectory with the potential to continue advancing. Energy research making use of scenario analysis has accompanied the process.

What is the power system like in Chile?

In 1999, the power system in Chile was 50% hydropower and 50% fossil fuel-based. The share of fossil fuel-based power increased to approximately 60% until 2014. Today the power system of Chile is more than double the size it was in 2014, with a 63% share of renewables.
