

What's inside the power container

What is a container & how does it work?

Containers make it easier to design the layout of an app. When a control (e.g. a button) is placed inside of a container it becomes automatically positioned. It removes the error-prone positioning of drag-and-drop and the tedious nature of manually writing X & Y position properties for individual controls.

What is a container control in power apps?

In Power Apps, the container control groups multiple controls and designs the responsive layouts. We can drag and provide customized height and width properties for the controls present within the container. Even though Group also has the same functionality, like grouping all controls, there is still a big difference.
